Help us investigate low back pain!

We are looking for volunteers with and without back pain between the ages of 21 and 65 for a research study.

Participants with back pain will receive spinal manipulative treatment (SMT), complete questionnaires, and perform laboratory testing over an 8 week period.

Those without pain will be asked to participate in 2 laboratory testing sessions.

If you are interested, please contact:

SMT is hands-on care provided by an osteopathic physician (D.O.) and is aimed at relieving pain and improving physical function. During SMT, an osteopathic physician may move your body and apply high velocity low amplitude thrusts, also known as spinal manipulation.
